

BIOTRACK JOINS FORCES WITH LOTEK WIRELESS FROM CANADA

Wareham, Dorset, UK, (March 16, 2007) – Biotrack Ltd has announced today that it has been acquired by Lotek Wireless, Inc., a complementary telemetry company based in Newmarket, Ontario, Canada. This new partnership will offer telemetry researchers a broader array of products and services to assist in the monitoring of wildlife around the world.

Biotrack's radio tags are used mainly on birds and small animals and can be found on over 1000 species spread across 106 countries. The Lotek Wireless product families include radio, acoustic, archival and satellite technologies for monitoring fish and wildlife on every continent and in every ocean. The companies have over 45 years of combined experience in the biotelemetry market.

"We are delighted about this new partnership and the combined range of tracking equipment and expertise we will be able to provide for our customers", said Biotrack's Brian Cresswell. In addition to leading edge equipment, both companies can offer the best advice for researchers because of their direct involvement in wildlife research design and implementation, equipment training and data analysis. "This alliance will allow us to expand our markets and continue with our passion for the environment" added Jim Lotimer, President and CEO of Lotek Wireless.

Lotek Wireless and Biotrack are world leaders in the design and manufacture of wildlife monitoring systems and have offices and manufacturing facilities in Wareham, Dorset, UK and Newmarket, Ontario, Canada and St. John's, Newfoundland, Canada. The combined companies are committed to providing innovative solutions for a sustainable future.
